

Ugly Milkcap *Lactarius turpis* [Phillips (2006) p57]. Very common, usually with birch in damp places, late summer to late autumn. Cap convex, then centrally depressed, margin inrolled at first, firm, thick-fleshed, sticky and slimy, margin paler. Stem stout, cylindrical or narrowing towards base, colour as cap. Flesh white, discolouring brown. Gills, cream to yellowish-buff, pale sepia where wounded. Not edible
